

Find Your Ring Size at Home

Printable Ring Size Guide

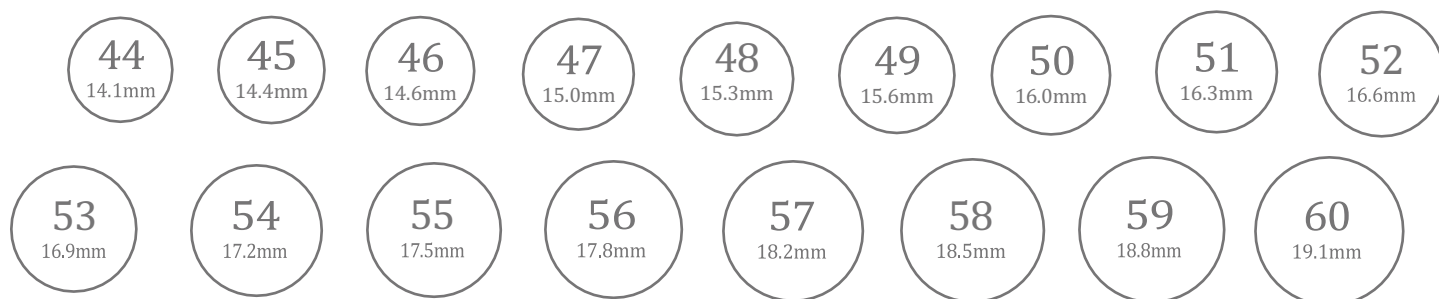

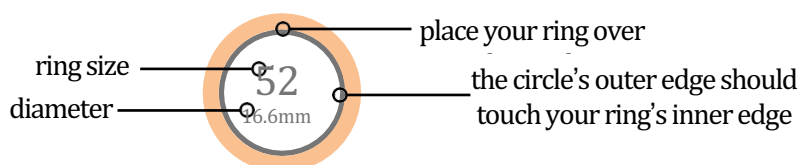

Before You Begin

1. First off, to ensure the guide is accurate, this page must be printed at 100% scale on A4 paper.
2. Before printing, make sure to set the correct scale: for Windows, choose 'none' for page scaling, then print. On Mac, change the scale to 'custom', enter '100', and print. Be sure you're printing on A4 paper!
3. Once printed, you can start using the guide to determine your ring size.

Measuring the ring you already have

1. Keep in mind that each finger can vary significantly in size, so be sure to choose a ring that will fit the exact finger you're designing the new piece for.
2. No ring for that finger? Try using a ring worn on the same finger of the opposite hand. If you're measuring for an engagement ring, you can use a ring worn on the right hand's third finger. But note it may require adjustment later.
3. Match the size using the circles below: Place the ring over the printed circles and find the one that aligns perfectly with the inside edge of your ring.

If your ring size appears to fall somewhere between two different circles, it'll be a half size measurement, for example '52 ½'
